

Optimizing Workflows for Cinema and TV Visual Effects

benuts is a leader in the creation of visual effects for cinema, television, and multimedia. Working to tight production deadlines, the company's designers, animators, and artists manipulate large and complex image files, video footage, and 3D models. As data volumes and workflow complexity increase, benuts needs to keep multiple parallel projects running smoothly and efficiently. With a new storage environment based on Lenovo ThinkSystem SR550 servers, powered by 2nd Gen Intel® Xeon® Scalable processors and running TrueNAS Core, linked to two Lenovo Storage D3284 direct-attached enclosures, the company has empowered its growing workforce to tackle complex, time-sensitive client projects at high speed and without needing to worry whether resources will be available.
